

Instructions: File Storage and Naming Conventions

1. Uploading the Reliability Recommendation Spreadsheet

The Reliability Recommendation Spreadsheet must be uploaded to the following folder:

a. 001 Tie Recloser

Inside this folder, the following structure must exist:

i. MainCircuit_Tie_Circuit#1_Circuit#2_Circuit#3

1. If the folder does not exist, it must be created using this exact name.
2. If the folder already exists, use it and upload only the spreadsheets related to the Tie analysis and its recommendations.
3. All recommendations related to the same analysis must be stored within the same folder.

2. Storage of the Model and the Single Line Diagram (SLD)

The model and the Single Line Diagram (SLD) must be saved in the following folder:

a. Feeder by Region

i. File Naming Format

1. Models:

This refers to the main circuit model (Main Circuit) where all modifications were performed. Only the modified main circuit must be stored.

a. Format:

- i. XXXX-XX_Reliability_Recommendation_INITIALS_MM-DD-YYYY

2. Single Line Diagrams (SLD)

a. Format:

- i. XXXX-XX_SLD_INITIALS_MM-DD-YYYY

b. Storage:

- i. SLDs must be stored individually, one per feeder.

1. Purpose:

To minimize confusion and reduce rework, Single Line Diagrams (SLDs) must be created and maintained **individually by feeder** and not combined into a single file.

2. Justification:

When an SLD combines multiple ties and perspectives (e.g., Person 1 documents 6010-01/02/03 and Person 2 documents 6010-03/04/05), it creates a chain of dependencies. Each change requires remembering and updating the other document, increasing the risk of inconsistent versions.

With individual SLDs per feeder, the feeder's folder will always contain a single "latest version" to update. This simplifies change control, reduces errors, and accelerates reviews.

3. Naming Format for Model Comments

All recommendations issued by the Reliability DA team must follow a standardized naming format. Comments must be documented using the department's established structure, as outlined below.

a. General Format

- i. Action-Device-Manufacturer-Model-FID
- ii. Action-Device-Manufacturer-Model-FID-Reason for Removal FID

b. Installation Recommendations

- i. Format:

1. Install-Device-Manufacturer-Model-FID

a. *Example: Install-3Ph Rec-S&C-IR-123456*

If the installation is required due to another device, the format is:

2. Install-Device-Manufacturer-Model-FID DUE TO FID

a. *Example: Install-Cutout Blades-N/A-N/A-123456-3Ph 123456*

c. Removal or Replacement Recommendation

- i. Formats:

1. Remove-Device-Manufacturer-Model-FID-DUE TO FID

a. *Examples: Remove-Cutout Blades-N/A-N/A-123456-3Ph
123456*

2. Replace-Device-Manufacturer-Model-FID-DUE TO FID

a. *Examples: Replace-Cutout Blades-N/A-N/A-123456-3Ph
123456*

**d. Device Format:**

- 3Ph Rec
- 1Ph Rec
- OH cFCI
- UG cFCI
- Fuse
- Cutout Blades
- Switch
- Fuse Holder

e. Manufacturer Format:

- S&C
- Hubbell
- Sentient
- N/A

f. Model Format:

- IR (IntelliRupter)
- TSII (TripSaver II)
- VT (VersaTech)
- MM3
- ZM1
- UM3+
- N/A
